

# Cyber security for all logistics processes along the value chain

**According to Bitkom, cyber attacks have caused €179 Billion in damages during 2023 in Germany alone. The issue of cybercrime poses ever greater challenges to the logistics industry in particular.**

**The consequences are devastating.** Attacks on company IT networks lead to production and delivery failures, and in the worst case even to a complete shutdown of operations. Important information is irretrievably lost. This can not only lead to considerable financial losses, but also cause lasting damage to a company's reputation. Furthermore, such an incident can set a vicious circle in motion: Business shutdowns cause further financial losses, and in the event of a data breach, partners and customers can assert legal claims for damages, further exacerbating the situation.

As attackers employ increasingly sophisticated tactics and technologies to circumvent security controls, the requirements for cyber security are constantly changing. In order for your company to quickly detect such attacks and limit the damage, logineer is there to ensure the security of your data along the entire value chain with comprehensive solutions and state-of-the-art technology.

---

## logineer - your IT partner for cyber security services in logistics

- **Long-standing experience:** We offer our customers comprehensive expertise when it comes to the detection and clarification of IT vulnerabilities.
- **Integrated cyber security solutions:** logineer collaborates with you to develop a bespoke concept for your company – from consultation to implementation.
- **Outstanding solutions:** Our cyber security services are frequently tested and regularly certified by renowned institutions (incl. ISO27001, ISO27014, ISO9001)
- **High IT security:** We detect and address vulnerabilities in your IT infrastructure, deploy state-of-the-art firewalls and ensure reliable web browsing.
- **Round the clock protection:** Our cyber security services are continuously operating both preventatively and in response to attacks. In the event of a cyber attack, we are available around the clock to prevent or limit damage.

### Strengthen the resilience of the supply chain through cyber security!

Always be one step ahead of attackers with logineer's expertise in all matters of IT security.

With our parent company q.beyond, we offer you many years' experience in cyber security services combined with our specialized knowledge in the logistics industry. You have a partner by your side who protects your IT assets with targeted help.

## Our services for optimal security of your IT infrastructure

Today, logineer offers three services, which help you sustainably increase the protection of your IT systems: Vulnerability Management helps you find security gaps in the IT systems you use. EDR is installed to detect attacks in real time. To increase the awareness of your workforce, we offer security training tailored to your needs.

### **Vulnerability Management Service:**

Our Vulnerability Management Service is the basic building block of a comprehensive cyber security strategy. Using state-of-the-art IT tools, we find and eliminate vulnerabilities throughout your entire IT – in the hardware and software, as well as in networks and Shadow IT. When doing so, we take into account the special features of international logistics and also bring our special industry knowledge in the area of IT security.

### **Security Awareness Training:**

Security awareness equips your workforce with critical knowledge about IT security. In focused training courses, employees gain an increased awareness of cyber security and data protection topics, empowering them to prevent security incidents.

### **Extended Detection and Response (EDR):**

EDR is a further development of the virus scanner. With it, we can protect all end-user devices connected to your corporate network against cyber threats. As the solution detects threats in real time, it is possible to take defensive actions and detect harm at the outset. This way negative effects can be quickly minimized.

logineer is an IT service provider with around 200 IT and logistics experts, digitalising logistics companies across the globe. Freight forwarders receive all IT services securely and from a single source.

logineer has outstanding experience in international sea and air freight as well as in contract logistics. Our services include strategy-based IT consulting, product and process consulting, implementation, system integration, operation and our own global 24/7 help desk. The portfolio has a modular structure: The solutions offered include IT infrastructure & workplace, financial accounting, transport management, warehouse management and cyber security.
